Use-Case Model

1. Use-Cases Identification

Use case: Find accommodation

Level: user-goal level

Primary actor: Student

Main success scenario: The user creates an account, if they don't have one yet. They then log in into the application and find an accommodation based on their preferences. Then, they choose one.

Extensions: They don't find an accommodation suitable for their requirements, or the database server doesn't work.

Use case: Add accommodation

Level: user-goal level

Primary actor: Student

Main success scenario: The user creates an account, if they don't have one yet. They then log in into the application and add a new shared space/accommodation.

Extensions: The database server, or the database connection don't work.

Use case: Delete user

Level: user-goal level

Primary actor: Administrator

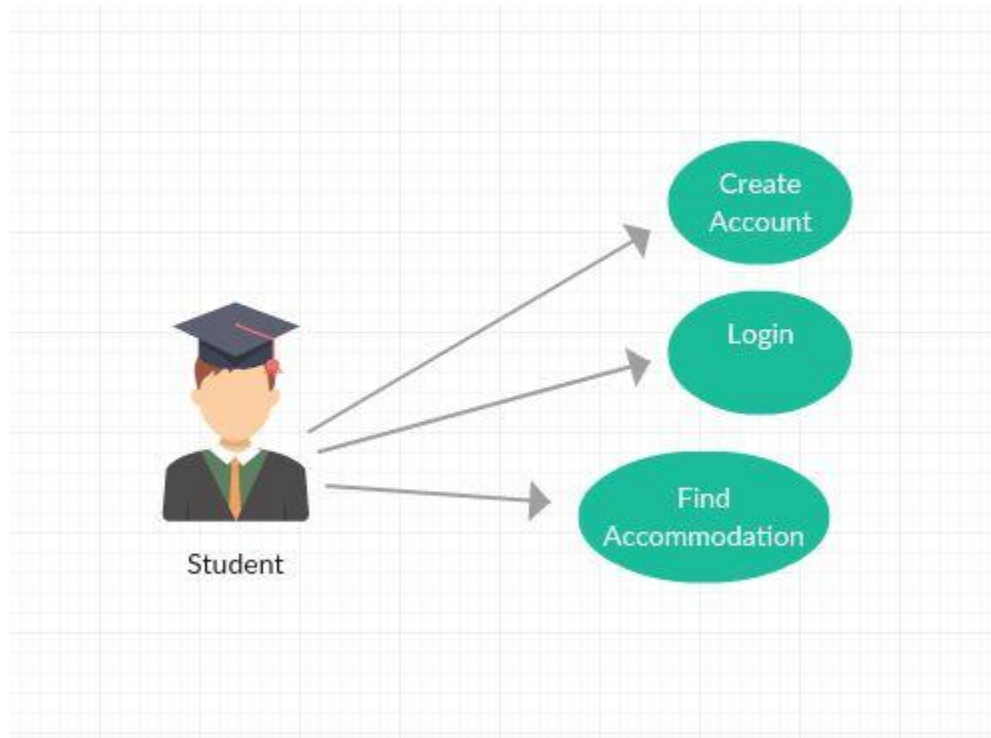

Main success scenario: The administrator (or even University representative) logs in the application, finds a user and deletes it.

Extensions: They don't find the user.
